VARIED AND INTERESTING.

It is a surprising fact that there are towns west of the Missouri river of less than twenty thousand inhabitants in which real estate is daily fetching a higher figure than in some Eastern cities.

A SINGULAR custom of the gentlemen of Mexico is to embrace and often kiss each other when they meet. It is rather a strange sight to see two swarthy and bewhiskered individuals indulging in a beartike hug.

THE "staff of life" of the French army is a compound of bread, meat and vegetables. it is condensed into a compact form and is easily carried. At short notice it can be converted into a soup or a stew and is said to be nutritious and palatable.

A NUMBER of society young ladies in New York have formed what is termed a walking club. It binds its members to five miles a day in fine weather and two miles in foul. It has a regulation pace and costume and fixed days for its grand meets. The corset is tabooed and high heels are considered out of the question by this remarkable organization.

What is thought to be the largest chimney in the United States was constructed at the Charlestown Navy Yard in 1857. It is 247 feet in height, twenty-six feet taller than the Bunker Hill monument. It is twenty-six feet square at the base and thirteen at the top and is capped with four granite stones weighing eight tons. There were 1,500,000 bricks used in building and the aggregate weight of the structure is 8,500

The law relating to the civil rights of women in France provides that they may carry on business as merchants and there are numerous cases in which wemen are at the heads of commercial houses. The law sino permits them to do as they has will their personal property. This, however, is the extent of their liberties. They can not | hargesting my potatoes, I discovered the act as witnesses in civil suits, attest a birth or death nor take part in family councils.

A stony is related in a Western paper of the manner in which a young man's presence of mind saved him from the clutches of a huge bear. He climbed a tree up which the bear pursued him and was gaining on him when an idea struck him. Seizing his hat from his head, he set it on fire with some matches he happened to have, and dashed it into the bear's face who quickly beat a retreat and left him muster of the situation.

Among the most valuable specimens to the possession of egg collectors are those of the auk, a bird said to be now nearly ex tinet. Forty years ago, says an historica paper, only about thirty auks and forty iggs were recorded as belonging to public and private collections. At one time fifty dollars were paid for two auks and two aggs; a little later half that sum for one ogg; and not very long since we read that ave hundred dollars were given for an ogg. These eggs are found only on dizzy loughts among the cliffs and crags of the Arctic seas, and are only obtained with great peril.

As eminent authority says that "a good laugh lengthens a man's life by conveying a distinct and additional stimulus to the vital forces." If a person on the verge of a paroxysm of insanity can be made to laugh heartily, the paroxysm will be post-poned. A fit of anger is dispelled by Intense and morbid religiousness yields to an innocent, mirth-provoking joke. A person in the depths of sorrow, beguiled into gentle laughter, will and his anguish mitigated for the time being. Smiles are like sunshine, they make

A netter long entertained by individuals of a bilious nature is to the effect that chocolate tends to biliousness, but it is one of the popular fallacies which one by one are sinking into oblivion, and chocolate is becoming daily more of a beverage in this ountry than it ever was before. Many who desire a warm, nourishing drink dur ing the middle or at the close of the day can find nothing more delicious than a well-prepared cup of chocolate. Coffee tends to wakefulness as well as to nervousness, and although many drink it morning moon and night, few are able to stand ! to that extent for any length of time. Checolate is most suitable to those who have much brain-work to do, and it is especially recommended to those who have weak stomachs, as it is very easily di-

To construct a railway of five hundred miles, about 1,580,000 ties are required. They are placed, on the average, about two feet apart, and though the above figure sppears large, by summing up the number for one mile it will be found that over 3,600 ties are required. The cheapest railroad ties in use in this country are of cotton wood, the price of each being about fifty cents, which have to be renewed about once in two years. Thus it will be seen that the price for ties once in two years, at the lowest figure, over five hundred miles, averages about \$500,000, To gether with cost of rails, labor, etc., somedea may be formed of the great cost of construction of a read, without consider mg the purchase of land, erection of bridges, the excavation of tunnels, the building of depots, cars, engines, freight-

ix referring to the preservation of the sead a medical journal says that Edward L, who di d in 1307, was in a fair state of preservation nearly five hundred years later. The flesh of the body was wasted somewhat, but not decayed. The body of Canute, who died in 1017, was found fresh in 179k. In 1569 three Roman soldiers, in the dress of their country, fully equipped with arms, were dug out of a peat mass acar Aberdeen. They were quite fresh and plump lifter a lapse of about fifteen trandred years. In 1717 the bodies of Lady Kilsyth and her infant were embalmed. to 1796 they were found as perfect as in the hour they were embalmed Every feature and limb was full. The infant's features were as composed as if he had paly been asleep for eighty years. His color was as fresh and his flesh as plump and full as in the perfect glow of health. the smile of infancy and innocence was on his lips. At a little distance it was diffito distinguish whether Lady Kilwithe was alive or dead. The question is, what preservative was used, and how ap-

Tuar fishes utter sounds has been known for many centuries, and some years ago it was taken advantage of by a showman at s watering-place in England to deceive the general public. The owner of the talking ash had a portable aquarium upon the beach, and in it several fishes, and when a crowd would gather about the tank, he wound announce that the fish would answer questions. He would then lift one of the fishes out of the water and allow the spectators to listen to its grunt, explainmg that it could talk only when under water. The fish was then returned, and some one would ask a question, upon which a fish would dart to the surface, and a soft, low voice would be heard answering the question correctly. But the secret of this very remarkable fish was Gually found out. A very small man was concealed in the imitation rock-work of the tank, who replied to the questions through a tube that led to the surface, the opening being concess I in the rock-work meer the debes

# FARMING INTELLIGENCE

Carrage requires richly-manured soil, and the earlier the first crop is planted the plants to the acre.

Some cows seem to enjoy eating the lit-ter from the horse stable. While this may not injure the cows it is disagreeable to using their milk, therefore care should be taken to exclude the litter from the cow yard.

Grasses for mixed meadow are given as follows: Twenty pounds of orchard grass, ten pounds tall oat grass, five pounds timothy, six pounds of red clover and ten pounds of perennial rye grass. This makes a good mixture for hay and pasture.

A sare covering for shingle roofs is hot gas tar mixed with fine air-slacked lime, applied with a brush, and immediately dusted with dry hydraulic cement. This hardens and makes a tough, clastic coating, which will not take fire from sparks and hardly from flame.

To cuas a cow of milking hard, take a injure the inside of the teat. If the above fails, tie a string so as to form a bulge at and leave it in over night. Two or three trials will suffice.

The salting and curing of hams occasions but little trouble to most any farmer. When however, the hams are kept any great length of time, the greatest care will have to be exercised to prevent the inroads of "bacon bugs." An excellent preventive is to place the hams in a barrel and pack with powdered lime. This will keep out mold, rust or maggets.

A CARRYLL farmer in writing about scab in polatices says: "Two years ago, when old vines, as I drew them out, literally dive with flying ants. At that stage of growth they resembled small, white bugs To all I would say, dig your potatoes be fore the vines are fairly dead; then you have clear, smooth tube rs, generally quite free from scale."

In the matter of feeding sheep an agri-cultural paper says: "Field peas are cultural paper says: specially well adapted for feeding sheep as wool is a nitrogenous product and the pea is conducive to its growth. When the crop is cut while green, and as the peas are beginning to pod, it is very nutritious and is each in albumen. It should be cure tas carefully as clover and fed the

A WHITEWASH for out-of-door purposes is thus made. For one barrel of wash, take half a bushel of white lime, three pecks hydraulic cement, ten pounds umber pounds othre, one pound venetian red, one fourth pound lampblack. Slake the lime, cut the lampblack with vinegar; mix, well together, add the cement and fill the barrel with water. Let it stand twelve hours before using, and stir frequently while putting it on.

A PROMINENT agriculturist claims that the softening and moistening of foods by heat and water is of no aid to digestion He further says: "Many farmers think they can not feed shorts, for example, dry, but must either wet or cook them. I would advise all such to try for a week or two feeding them dry, mixed or not with other teed, giving plenty of water to drink in a separate trough or both in the same trough as that in which the feed was given.

Among the most annoying things about a farm are "blind" stumps. The mower may override them, but the cultivator or expected. The best methods of removing these is to use the mattock on small ones and on large ones, remove the surrounding bore holes with a downward slant and fill with kerosene and burn. Powder is useless and dynamite too dangerous, but the kerosene method is harmless and efficu-

ous. The result of the quite common process of butter-working is the injury of the grain or the spoiling of the butter through the imperfect extraction of the buttermilk. The best method is to cease churning as soon as the butter masses as large as a pea, and draw off the buttermilk. Drench thoroughly with two or three fresh waters and place in a bowl, salting with one ounce of fine sait to the pound. Gently extract the excess of water and set aside for twentyfour hours to drain, after which, work evenly and pack.

PUMPRING are sometimes grown profitably as a special crop and are better thus grown than as a catch crop with corn. The land is faid out in cross rows, seven feet spart, and three seeds are sown at each rossing. A shovelful of manure should be put in each hill and a large handful of hen manage and ashes scattered around the young plants as soon as they come up. crop is cultivated precisely as squashes are and yields usually twenty to thirty tons of pumpkins, which are quite equal to turnips and keep quite as well in a cool cellar or root house.

Fon hay it is best to sow the oats as early as possible and to use three bushels of see: to the acre. The crop is cut when the head first shows the blossom, and is best cut with a reaper and cured on the ground and hen bound in sleaves. It is then most easily handled, and is readily cut up in a adder cutter and fed with meal or bran or oth. The hay, however, is far better and larger in yield if peas are sown with the oats; two bushels of each being sown. The orts hold up the peas and make the crop asy to cut. Five tons of the best kind of cured fedder may thus be grown to the

FARCT is a serious disorder which affects the blood and appears in small watery pustules on the skin. But the appearance of these pustules is not conclusive as to farcy, as they may be produced by over use of corn or sudden checks to the perspiration, which is probably the cause in this case. Farey is apt to result in glanders and fatal blood poisoning, and it is well to be particular in any case in which watery pustules appear and break and form stubborn sores. The remedy for any disorder of the blood which affects the skin is hyposulphite of soda in one ounce doses given daily for some weeks.

A PARMER Writing to a journal of agriculture says: "No other part of my farm pays so well as the twenty acre sugarbush of 300 trees, the annual product netting about fifty cents each. Besides the syrup this ground furnishes considerable sheep pasturage, and is further valuable in the annual growth of small timber. No man in the United States can afford to cut down a good sugar orchard or suffer it to remain unused. The cost of first-class equipment for 1,000 trees will be about fifty cents per tree, or \$500, or about equal one year's income from the orchard. This includes a convenient house, best evaporator, and good tin buckets with wooden covers. The work of the bush requires great care, but there is nothing that any intelligent person can not soon learn

A formest of science presents the impossimility of the existence of a race of beings similar to Earth's, upon the planets Satura and Jupiter, in the fact that, their masses being so much greater, the attraction exerted you'd so impode their moves juts as

to sender locomotion impossible.

### Wonderful Cures.

W. D. Hoyt & Co., wholesale and retail Druggists of Rome, Ga., say: "We have been sell! Dr. King's New Discovery, Electric Bitters and Bucklen's Arnica Salve for two years. Have never handled goods that sell as well, or give such universal satisfaction. There have been some wonderful cures effected by these medicine in this city. Several cases of pronounced Consumption have been entirely cured by the use of a tew botties of Dr. King's New Discovery, taken in connection with Electric Bitters. We guarantee them always. Sold by Penny & McAlister.

Penny & McAlister can always be relied upon not only to carry in stock the best of everything but to secure the Agency for such articles as have large hen's quilt and insert into the teat well-known merit, and are popular with the pec-when filled with milk, being careful not to ple, thereby sustaining the reputation of being always enterprising and ever reliable. Having secured the Agency for the celebrated Dr. King's the lower end of the short quill, so as to New Discovery for Consumption, will sell it on a prevent it from going further into the teat, positive guarantee. It will surely cure any and every affection of the Taront, Lungs and Chest, and to show our confidence, we invite you to call nd get a Trial Bottle Free.

> When liaby was sick, we gave her Castoria, When she was a Child, she cried for Castoria. When she became Miss, she clung to Castoria. When she had Children, she gave them Castoria
